## Product Description

### Product Description

GE FANUC 531X111PSHATG3 PPOWER SUPPLY BOARD

### Technical Application

General Electric developed the 531X111PSHATG3 card as a motor field control and power supply board. It is a member of GE's 531X replacement series of drive boards and cards. Members of this series can be installed in a number of GE older and obsolete models of drives and exciters. This board is a key component of the overall drive system as it provides the power supplies needed for drive operation. Using this board also provides power to the drive's motor field circuitry. G3 series of this board features MOVs for the AC line that are mounted externally rather than on the board itself.
